SLOPPGEN: A Problem Generator for the Two-Dimensional Rectangular Single Large Object Placement Problem With Defects

Working Paper No. 28/2012, Faculty of Economics and Management, Otto von Guericke University Magdeburg.

Abstract: In this paper, a problem generator for the Two-Dimensional Rectangular Single Large Object Placement Problem presented in which the large object includes one or several defective areas. The parameters defining this problem are identified and described. The features of the problem generator are pointed out, and it is shown how the program can be used for the generation of reproducible random problem instances.
