Editorial Policy

Operational Research (OR) involves the application of scientific methods to the management of complex systems of people, machinery, materials, money and information. It seeks to produce an understanding of managerial problems and to develop models which will enable the consequences of decisions to be investigated. OR methods have already had widespread application and success in many areas of business, industry and government, and their use is rapidly increasing in social systems and in the international arena. The European Journal of Operational Research (EJOR) is intended to strengthen these advances by publishing high-quality, original papers that contribute to the practice of decision making, within and beyond Europe, irrespective of whether their content describes an application or a theoretical development. A special call is made for case study papers showing OR in action in firms and other organizations. Mathematical or computer-science contributions should be capable of being used in the foreseeable future.

EJOR has regular and feature issues. Almost all issues contain a leading invited review explaining the developments in an OR topic over the past five years to the general OR reader. In addition to the other five types of contribution described in the Instructions to Authors at the end of this issue, EJOR includes OR software news (including ORSEP) and reviews of books published recently. For further information, see the Instructions to Authors at the end of each issue. Authors of contributions are asked to read these Instructions before sending four copies to any of the editors at the address above.

Volume 171, Issue 3, 16 June 2006

CONTENTS

Feature Cluster: New Opportunities for Operations Research

- 891 New Opportunities for Operations Research – Feature Issue of the Joint EURO/INFORMS Conference, Istanbul, July 2003

G. Wäscher

EURO Gold Medal Award 2003

- 894 On the Hungarian inventory control model

A. Prékopa

Management Science Strategic Innovation Price 2003

- 915 The valuation of options on capacity with cost and demand uncertainty

S. Spinler and A. Huchzermeier

Excellence in Practice Award 2003

- 935 MABS: Spreadsheet-based decision support for precision marketing

B. De Reyck and Z. Degraeve

- 951 ARMS: An automated resource management system for British Telecommunications plc

C. Voudouris, G. Owusu, R. Dorne, C. Ladde and B. Virginas

- 962 LAPS CARE—an operational system for staff planning of home care

P. Eveborn, P. Flisberg and M. Rönnqvist

Finance and Accounting

- 977 Bayesian portfolio selection with multi-variate random variance models

R. Soyer and K. Tanyeri

- 991 Implicit–explicit Runge–Kutta methods for financial derivatives pricing models

J. de Frutos

- 1005 Bid calculation for construction projects: Regulations and incentive effects of unit price contracts

H. Missbauer and W. Hauber

Production, Logistics, Supply Chain Management

- 1020 Integrated technique assessment based on the pinch analysis approach for the design of production networks

J. Geldermann, M. Treitz and O. Rentz

- 1033 Modeling reverse logistic tasks within closed-loop supply chains: An example from the automotive industry

F. Schultmann, M. Zumkeller and O. Rentz

- 1051 Hybrid genetic approach for solving large-scale capacitated cell formation problems with multiple routings

A.L. Nsakanda, M. Diaby and W.L. Price

- 1071 Multi-item spare parts systems with lateral transshipments and waiting time constraints

H. Wong, G.J. van Houtum, D. Cattrysse and D. Van Oudheusden

- 1094 A comparison of outbound dispatch policies for integrated inventory and transportation decisions

S. Çetinkaya, F. Mutlu and C.-Y. Lee

Natural Resource and Energy

- 1113 Non-convex power plant modelling in energy optimisation

S. Makkonen and R. Lahdelma

- 1127 Interior point models for power system stability problems

W. Rosehart, C. Roman and L. Behjat

- 1139 Optimization of a large-scale water reservoir network by stochastic dynamic programming with efficient state space discretization

C. Cervellera, V.C.P. Chen and A. Wen

Airlines

- 1152 Check-in computation and optimization by simulation and IP in combination

N.M. van Dijk and E. van der Sluis

- 1169 A partially integrated airline crew scheduling approach with time-dependent crew capacities and multiple home bases

Y. Guo, T. Mellouli, L. Suhl and M.P. Thiel
